

Our business objective is that inexpensive doesn't mean 'cheap' or lacking of features,, see our DMEFree description

Our DMEFree software is only \$300.00 (as of 10/2009 prices subject to change). In our earlier years we offered only one software program called Rxdme2 for approx \$2500.00. Back then even this was considered affordable as the closest competitor sold their system for over \$5,000.00.

The objective of DMEFree is to give you a lot more management and freedom than the "Free" Medicare software. Here are features that set DMEFree apart.

1. DMEFree is Windows based
2. Fully Multiuser on Windows networks at no extra charge!
3. Stores all data ie Patients, Doctors, Items/Procedures, Diagnosis, Modifiers, and much more
4. Quick claim renewal for rentals, recurring sales
5. Reconcile
6. AR
7. Serial# tracking
8. Patient notes, scheduling

There are many reasons to trade with PCSolutions, do not hesitate to ask more questions
